How to set our videos live wallpaper on iPhone and iPad If you want to set the video to your live wallpaper on iOS then you need to first convert it to the desired format. Once you've done this, you can easily set your wallpaper settings app. Here are some apps that you can use to perform this operation: All of these apps can easily convert your local storage to any video direct. This may come with some drawbacks depending on the selected application. For example, it requires an intoLive purchase in case you want o to create a live photo that is longer than 5 seconds. In addition, TurnLive and Live Maker can impose watermarks on your projects, depending on how many times you've used them. Android Setting videos for live wallpapers is a complex process for Android. You need to convert and set your video to the desired format using a dedicated app that also works with your live wallpaper provider. Therefore, if you're really interested in setting a custom video for your live wallpaper on Android then we recommend you follow the guide below to make your video. It's a long but filling process that ensures that you get the live wallpaper you're looking for in the end. In addition, you will be able to create complex designs and test your video as much. How to create your own among us Live Wallpaper Above wallpapers may not be for everyone and you may want to create a live wallpaper for your clip. This can be easily done using dedicated applications for iOS and Android. Let's take a look at how you can create your own range of Live wallpapers. The things you need for a video you want to make as your Live wallpaper, you can use YouTube to download any video from YouTube Services on the web GIF video you want to turn into Live Wallpaper (Android only) You can also use some of the best among us GIF here. Live wallpaper making app: iPhone and iPad | Android How to create Live Wallpapers for iOS Note: the intoLive app is currently limited to 5 seconds for free users. If you want to create more live wallpaper then you may need to buy a pro version. To get started, download the video and the app above. If you have all the resources for local storage, run the intoLive app to start. Give the necessary permissions that the app requires until you see the Start screen. Now select the video you want to convert to a live wallpaper from your local library. Start cropping the video to the desired length. You can also use the trim feature to edit certain parts of a video you don't like. If the video isn't the right proportion for your phone, tap Canvas. Now choose the right aspect ratio for your iOS or iPadOS device. You can also use a collage of canvases to layer multiple videos with a single live wallpaper. Note: Collage live wallpapers all play at the same time instead of triggering individually. Use the preview video pinch gesture to align the video correctly from the canvas. If necessary, change the video speed by using the Speed function. Now at the bottom, tap Key Photo. Here you can scroll the timeline to select the static picture you want to show when the live wallpaper is inactive. Use Blur, Filter, and Sticker options at the bottom make your main photo aesthetically pleasing if necessary. Note: If you apply filters to your key photo, you might want to transfer the same changes to your video. This will help to create a smoother transition between the two. When you're happy with your key photo, tap Make in the upper-right corner of the screen. Tap No repeat. You can also use the repeat feature loop for your live wallpaper a few times, but you need to buy a pro version to access this feature. intoLive will now process your creations and once the video is finished you will get to see the final preview. To save your photo to your local storage, tap Save real-time photo at the bottom of the screen. Now open the Settings app and tap Wallpaper. Tap Select a new wallpaper. Now select an album called Live Photos. Select the direct photo you just created. Move the photo to fit the screen properly. Additionally, you can turn off the perspective zoom at the bottom to remove a little zoom introduced by default. When you're happy with the layout, tap Set. Now choose where you want to set the new live wallpaper and set your new wallpaper automatically. That's it! You should now be customized among us for live wallpaper on your home screen and lock screen. How to Create Live Wallpaper for Android Note: guide is for the visceral experience of Android devices. If you use a manufacturer's skin such as MIUI, OneUI, or ColorOS, the process may vary slightly depending on the location of the wallpaper settings. Start sourcing the video you want to set your live wallpaper. Additionally, make sure to download KLWP live wallpaper maker app from the link above. If the video exists in the local storage space, open it in the gallery and edit it at the length you want. If you have a longer video, you might want to edit it and get the clip you want to set as your live wallpaper right now. Start the clip in the Google Photos app. Now, at the bottom of the screen, tap Edit. Use the timeline at the bottom of the screen to change the clip to the desired length. Note: It is recommended that your video does not exceed 15 seconds with maximum live wallpaper. When you're done, tap Save a copy in the upper-right corner. Now that you've edited the original video, we're converting the video to GIF. While there are dedicated apps for Android, most of them seem to be loaded with bloatware and adware. Therefore, we recommend that you use a trusted website instead. To start, visit this link on your Android device. On the other hand, if you already have an application that can convert video to GIF then you are free to use it instead. EZGif website link Tap Video GIF to start. Now tap Select File. Finally, select the video you want to use for your live wallpaper in your local storage. Tap Upload video. Wait until the upload is complete. Depending on the speed and connectivity of the network, it may take a few minutes. When the video is finished uploading, select the frame rate at the bottom of the screen. If you want wallpaper to be less choppy, then we recommend you choose a minimum frame rate of 20 at least. Once you've selected the frame rate, tap Convert to GIF. Note: You do not need to trim your video EZGif because it takes longer and you can change the clip anyway KLWP live wallpaper maker later. Under GIF preview, tap Save. GIF is now automatically downloaded to your local storage. Now launch KLWP's live wallpaper maker app on your Android device. Give him all the necessary rights and you will be taken to the homepage as shown below. KLWP will automatically load you preset. To start, tap the +button in the upper-right corner of the screen. Now tap Animated Image. At the bottom of the screen, under Items, tap Animated picture again. Now tap Select picture next to Bitmap. Select the GIF you just downloaded from your local storage. By default, the clip should be available in the Downloads folder. Tap Mode and choose Loop or Paused depending on your preferences. If you select Loop, the clip is played continuously in the background wallpaper. On the other hand, if you select paused, displayed as a picture and played only when you interact with it. Now tap Resize and select the fill mode you want depending on your clip and device layout. You may need to test an option before finding the appropriate option for the clip. Depending on your choice, you can specify the height, width, or both below. Use the arrows or size +to resize your GIF and match it to a given canvas. Notes: If you can't fit your clip on the canvas, tap Position at the top and use X and Y shear values to move the clip. If the clip is sitting correctly, tap Save in the upper-right corner of the screen. Now you get a disclaimer saying that the current canvas is not set as wallpaper. Tap Fix to get started. Now you can see the final preview of your current layout. If the clip doesn't fit the screen completely yet, don't worry, you can make changes after this step. At the bottom of the screen, tap Set wallpaper. The current draft is now set as wallpaper and you can view the changes in real time now. Tap and select Root in the upper-left corner if it's not already selected. Now tap and select the Layer tab. Use the Scale option to increase the image's size to the screen size. Note: You can tap Save in the upper-right corner and take a look at the home screen to see your changes in real time. If the image is scaled up, it should fit the screen perfectly. If you want to focus on the theme of the current video, you can go back to the GIF layer settings and change the X and Y shifts. It may take a few tries to get a GIF sitting perfectly according to the screen size, but it's worth the effort. Given that among us is a landscape game, most of your videos have a 16:9 ratio that you're trying to fit into your smartphone screens. Here are the settings that seemed to work for us and they can help you too. GIF ratio: 16:9 Device screen ratio: 18:7.9 Canvas screen ratio: default anchor: medium size: volumet width: 190 Height: 190 Scale: 1400 Note: The scale factor may be less or greater depending on the screen resolution of the device. If the image gets skewed on you, if you use the scale factor then you should try to change the size of either Crop fit or Fit Width. The Fit height option is only suitable if you use a GIF/video for a portrait. Once you're happy with the Home screen preview, tap the recording icon in the upper-right corner of the screen for the last time. Now tap the menu icon in the upper-left corner of the screen. Select Export Preset. Now enter the title of your finished product and the author's name. In the upper-right corner of the screen, tap Export when you're done. And that's it! Wallpaper is now being applied to your home screen. You will also be able to import the same file in the future to get this wallpaper without going through having to create it again. Note: Importing wallpapers from KLWP is a pro feature that can receive in-app purchases. Can I further customize the android live wallpaper? Yes, KLWP gives you the ability to add different indicators and unique data graphs to your live wallpapers for a truly unique experience. At the top of the screen, just tap + and select the item you want to add to the wallpaper. You can try all the features to find the best combination that suits your workflow. Some of the indicators you add are weather, reminders, calendars, battery icons, and more. We hope this guide not only helped you find some amazing among us in live wallpapers, but also learn how to create your own. If you have any further questions for us, you can contact us with the comment section below. RELATED
